- Firebase
- Node.js
- Express
- MVC
- RESTful API
- MySQL
- MongoDB
- JAVA
- React
- GIT

Experience and Projects

Full Stack Developer Student

Southern Methodist University   09/2018 to Current

- **Bro-Cooking** (http://bros-cooking.herokuapp.com/)
  - Initialized files and structures following the MVC paradigm. Built semantic templates with Handlebars
  - Created server file and RESTful api routes with Express. Built model file with Sequelize. Used OOP.
  - Used AJAX to get and put JSON from/to Edamame API and the API I created in the backend.
  - Used jQuery to manipulate DOM with the data returned from the AJAX call. Styled pages.
  - Communicated with team members. Tested and Debugged codes. Managed tasks and version control with Github.
- Built a restaurant app that logs users' order with Node.js, following MVC design pattern. Used jQuery and AJAX on the client side. Wrote ORM file and used Express.js to set up server and routes and parse data. Established connection with MySQL using mysql npm package.
- Collaborated with a team and developed an entertainment app that provides information on local events, restaurants and trends based on geo location. Used AJAX to get JSON from Seat Geek and Google API. Efficiently practiced version control by using Git and Github.
- Developed a train schedule app that can display, take in and store data by using jQuery, Moment.js and NoSQL cloud database (Firebase).
- Developed personal website using HTML/CSS, implemented grids and responsive design by using Bootstrap.

Producer/Web Editor   03/2015 to 03/2018

2LanesStudio – Dallas, TX
- Created, styled and managed static websites for local small businesses with HTML and CSS.
